

Jumpstart Chronicle: Netenrich Foundation for Google Chronicle™

Now enterprises and service providers that are transforming security operations with data have an effective, quick way to fortify their security posture. Netenrich jumpstarts Chronicle and speeds threat prevention, detection, and response with **Foundation for Google Chronicle**, an edition of **Resolution Intelligence Cloud™**.

Foundation for Google Chronicle adds multi-level multitenancy, Netenrich threat intelligence, real-time dashboards and reports, and much more to Chronicle. Netenrich implements Chronicle for you and provides a Customer Success Manager and customer support.

Feature	Value
Chronicle licenses from Netenrich	Foundation for Google Chronicle uses Chronicle as its security data lake and supports multiple instances.
Data analytics for cybersecurity	Foundation for Google Chronicle transforms petabytes of security data into meaningful insights using behavioral analytics, MITRE mapping, and machine learning that address critical business risk at scale.
Multi-level multitenancy and RBAC	Get highly scalable deployment, visibility, and management across multiple Chronicle tenants, secured with role-based access control. Create rules in Chronicle and apply them to one, some, or all tenants at once, saving time and ensuring consistency.
Threat intelligence	Discover top vulnerabilities and map threat trends from the Internet on one screen with vulnerabilities and threat intelligence.
Threat detection rules management and rule packs	Easily create and manage Chronicle detection rules, parsers, and forwarders. Apply them to one, some, or all tenants at once. Get rule packs of pre-built detection rules, parsers, and forwarders.
Dashboards and reports	Get insight from pre-built dashboards and reports you can configure using widgets that show real-time information across tenants.
Data search and availability	Search raw unparsed logs in Chronicle. Have one year of “hot” security data for detection and investigation of threats with long dwell times.
Single Sign On (SSO)	Click from Foundation for Google Chronicle to immediately investigate in Chronicle with sub-second search.

Optionally, add on:

- **ActOns™** correlate related events, tickets, users, and assets based on real-time data analytics and machine learning that improves over time.
- **Attack surface intelligence (ASI)** continuously and non-intrusively scans your attack surface to discover your publicly exposed digital footprint.
