

— 30-DAYS TO MEASURABLE OUTCOMES

Get an **Agentic SOC** in 30 Days. **Guaranteed.**

See what your SOC looks like when AI does the heavy lifting. A 30-day sprint that deploys specialized AI agents into your environment, activates machine- speed triage, and puts your team in control of outcomes — not alert queues.

No commitment required. No disruption. See real outcomes in 30 days.

WHAT IS THIS?

A 30-Day Sprint That Changes How Your SOC Operates.

Curious about what an Agentic SOC actually looks like? We will bring you in and show real outcomes in exactly 30 days. This engagement deploys a workforce of specialized AI agents into your environment, giving you machine-speed triage without forcing you to give up control of your engineering.

- ✓ Already delivered across **210+ enterprises.**
- ✓ Built for security leaders who need to see machine-speed detection and response in their environment; not in a demo.

THE GUARANTEE

We carry the delivery risk. Not you.

If outcomes aren't delivered within 30 days, walk away.
No obligations, no lock-in, no pressure to continue.

— MEASURED INSIDE YOUR ENVIRONMENT

Measurable **Security Outcomes.**

OUTCOME 01

98%

Reduction in Manual Triage

Your analysts focus on what matters, not on alert queues.

OUTCOME 02

<1 Min

MeanTime to Detect

Threats surface before the attacker gets a foothold.

OUTCOME 03

<3 Mins

MeanTime to Triage

From alert to verdict — faster than any human hand-off.

OUTCOME 04

30x

Detection Coverage

Behavioral observability across your full attack surface — not just what has a rule.

OUTCOME 05

99.02%

Human-AI Alignment

Every AI decision validated against expert judgment — at scale.

DEPLOYED SPECIALIZED AGENTS

A Workforce That Never Sleeps.

Specialized AI agents deployed across detection, investigation, correlation, and response —
running continuously with no shift gaps, no alert queues, no hand-off delays.

— WHAT HAPPENS IN 30 DAYS

Full Autonomy with Human-in-the-Loop

Three phases across four weeks. Your team moves from chasing alerts to supervising a workforce of agents —proactive, strategic, and in control.

PHASE 01

Foundation

Data onboarding and full-environment visibility. Before AI can execute, the foundation must be flawless.

- ◆ **Data Engineering:** Telemetry identification, parser configuration, log normalization, and data hygiene validation.
- ◆ **Detection Engineering:** Legacy SIEM correlation rules transformed into optimized detection logic aligned with MITRE ATT&CK.
- ◆ **Response Engineering:** Existing response and enrichment workflows rebuilt within the agentic platform.

OUTCOME FROM THIS PHASE

Your environment is fully visible, your data is clean, and the AI has what it needs to act.

PHASE 02

Intelligence

Detection tuning, behavioral analytics, and business ontology construction. Real threats surface. Noise disappears.

- ◆ **Context & Ontology:** Your environment is dynamically modeled so AI understands organizational impact and asset relationships.
- ◆ **L.I.C. Scoring Activation:** AI correlation engine activated — stitching signals using Likelihood, Impact, and Confidence scoring.
- ◆ **Glass Box Guardrails:** Strict parameters defined — what executes autonomously versus what requires human approval.

OUTCOME FROM THIS PHASE

Real threats are surfacing. Your analysts are seeing signals, not noise.

PHASE 03

Autonomy

Specialized agents fully operational. Machine-speed triage live. Your team transitions from alert-chasers to AI supervisors.

- ◆ **Agent Deployment:** Specialized AI agents activated across detection, investigation, correlation, and response.
- ◆ **Team Enablement:** Comprehensive training that transitions your SOC team from legacy alert-handling to operating as AI supervisors (proactive, strategic, and in control).

OUTCOME FROM THIS PHASE

Your SOC now operates at machine speed, with your team in control.
